Education

Stanford University Class of 2030
B.S. Computer Science, Neuroscience *Stanford, CA*

Cupertino High School Unweighted GPA: 4.00
16 APs; Founder, AI Club; Editor-in-Chief, The Prospector *Cupertino, CA*

Experience

Co-Founder/CEO May 2026 – Present
Memorable [memorable.sh] (YC S27) *Stanford, CA*

- Grew to 750+ users; deployed in YC's Quartermaster and Garry Tan's gbrain and gstack.
- Built brain-inspired procedural memory for AI agents, modeled on how the brain turns repeated actions into habits: successful runs become reusable workflows that cut steps and tokens on repeat tasks.

Member of Technical Staff May 2026 – Sep. 2026
AGI Inc.

- Built an iOS MCP server in Swift that lets any AI agent read the screen and tap, type, and navigate apps, giving users with limited mobility hands-free phone control.

Research Collaborator Mar. 2024 – Present
Spezi Lab (Stanford Biodesign Digital Health), Stanford University

- Built the OpenTSLM iOS app in Swift on Stanford's Spezi framework, running time-series language models for clinical reasoning over multivariate medical data.
- Shipped Spezi modules for HealthKit, Charts, and Epilog that collect and plot health data in real time and log seizure events.

Computational Researcher Jun. 2023 – Present
Peter Tass Lab, Stanford University

- Modeled seizure-suppression stimulation parameters with The Virtual Brain neural mass model alongside a Stanford postdoc, and built the clinical interface; only high school presenter at IEEE Body Sensor Networks.
- Published a comparison of supervised learning methods for EEG-based seizure detection and prediction.

Bioengineering Intern Jun. – Aug. 2025
Stanford Institutes of Medicine Summer Research Program (SIMR)

- Designed a single-channel portable fNIRS device via the Biodesign process: custom flexible PCB (78.9 × 43.3 mm) with photodiodes and 740/850 nm IR LEDs measuring oxy- and deoxyhemoglobin.
- Hit 100 g weight and $50 cost targets through repeated soldering, stress testing, and clinical wear trials.

Select Awards

Pete Conrad Scholar, 2025 Conrad Challenge; Power Pitch Award
Bryan Cameron Impact Scholar Finalist (2.5% acceptance)
Coca-Cola Scholar Semifinalist (1.2% acceptance)
Best Poster, IEEE MIT Undergraduate Research Technology Conference
2nd Place, California Science and Engineering Fair, Computational Systems: Medical
1st Place, Synopsys Science & Engineering Fair, Biomedical Engineering
State Winner, Samsung Solve for Tomorrow ($12k in tech for school)
